

Behavior data your district can stand behind.

One-tap capture for teachers · clinical measurement for specialists · ownership, isolation, and audit for the district.

Prepared for district leadership · Sure Step Education · 2026

THE PROBLEM

The FBA is defensible. The data behind it usually isn't.

Reconstructed records

Point sheets and recollection get reverse-engineered into progress data the week it's due. Contemporaneity — the thing hearings turn on — is exactly what's missing.

Specialists stretched thin

BCBAs and school psychs covering multiple schools spend clinical hours collecting and transcribing instead of analyzing and writing.

No chain of custody

Spreadsheets and binders can't answer the questions a program review asks: who recorded this, when, and who has seen it since?

"Districts rarely lose on the clinical judgment. They lose on the record."

WHAT THE STATUS QUO COSTS

Three line items you're already paying.

Legal

Due-process exposure

One unsupported BIP in discovery costs more than a decade of tooling. Undated, reconstructed behavior data is the soft target.

Clinical

Specialist hours lost

Every hour of paper-chasing per specialist per week is a school's worth of consult capacity over a year — already on your payroll.

Trust

Parent confidence

When the team walks into an IEP meeting with live, dated graphs instead of a binder, the conversation changes tone.

THE PLATFORM

One record. Three roles. Zero re-entry.

A FERPA-first behavior data platform where every role works the same live record — scoped by database-enforced permissions.

Teachers — free, unlimited

One-tap event capture with timers, prompted antecedents, offline mode. Specialist-assigned behaviors appear with operational definitions attached.

Behaviorists & school psychs

Latency→duration chains, defined 1–4 intensity scales, QABF/FAST screening, FBA-readiness, AI-drafted BIP/FBA/goals from real data.

District administrators

Own district tenant, role-based invites, site headcounts, audit log, FERPA export & deletion — governance without touching student records.

IN THE CLASSROOM

Capture that survives a Tuesday.

Any system that takes more than seconds per event gets abandoned by October. That's the bar.

1

Tap the behavior

Duration timer starts; antecedent captured at that moment, not at 4pm.

2

+1 repeats

A frequency counter rides inside the running window for repeated incidents.

3

Tap to end

Duration, consequence, and notes land on a dated, per-event record.

4

It graphs itself

Sessions roll into charts and exports the IEP team can use as-is.

- ✓ Installable on any phone or tablet — no app store, keeps working offline
- ✓ Behaviors assigned by the specialist arrive with the clinical operational definition attached

FOR YOUR CLINICIANS

Measurement a BCBA can build a hypothesis on.

Latency → duration chains

The directive is required before the latency timer can start; when the behavior is observed, one tap logs the latency and rolls straight into the duration window. One incident, clinically complete.

Operational definitions everywhere

Intensity is a 1–4 scale in the specialist's own written definitions — and it stays locked until those definitions exist. Behavior targets carry their op-defs to every teacher who uses them.

Function screening built in

QABF and FAST administered, sent, and scored in-platform; an FBA-readiness gauge shows when the observation record can support the write-up.

Role-gated by design

Latency and intensity simply don't exist for non-clinical roles. Teachers collect what teachers should collect.

DISTRICT CONTROL

Multi-tenant by architecture, not by promise.

District isolation

Your tenant's data is scoped by row-level security in the database. Admins see their district; teachers see their students. Verified by test.

Sites & seat counts

Staff organized by school site, headcounts by role — the same numbers your invoice is computed from.

Audit log

Exports, deletions, role changes, and any support access are logged with actor and timestamp.

Scoped sharing

A teacher shares one student with a specialist — never a roster. Access is revocable and visible.

Contract clarity

Term dates and per-seat pricing live on the account. Renewals are a conversation, not a surprise.

Exit with your data

JSON export any time; certified deletion within 60 days of contract end.

The policy says what the database enforces.

FERPA — school-official model

The district owns all pupil records; Sure Step operates under 34 CFR § 99.31(a)(1) with CSDPA / SDPC data privacy agreements supported.

SOPIPA — clean

No advertising, no profiling, no sale of student data, ever. Deletion on request. 30-day written notice for material policy changes.

Security posture

Row-level security on every table · TLS 1.2+ in transit · AES-256 at rest · US-region hosting · bcrypt-hashed credentials · API keys server-side only.

COPPA — simple by design

Students never log in and never enter data; all records are created by authorized staff.

Read it yourself: the public privacy policy documents even our support-access ("break-glass") procedure and its audit trail.

AI, WITH GUARDRAILS

Drafts the BIP. Never sees a name.

1

De-identify

Student and staff names are stripped to placeholders before anything leaves the app.

2

Draft from data

BIP / FBA / goals drafted from the actual observation record — frequencies, durations, antecedent patterns.

3

Restore locally

Names substituted back on the clinician's device. The AI provider never received them.

4

Clinician approves

Every output is a draft requiring licensed review before it goes near an IEP.

- ✓ District-level opt-in, under your data privacy agreement — off means off
- ✓ Uses your district's own BIP / goal templates as the structural guide

PRICING

Teachers free. Pay per clinician.

Charging per teacher is how behavior data ends up back on clipboards — so we don't.

\$0

Every teacher seat

Unlimited. Capture, ABC data, shared targets, offline, exports.

Per seat

Specialists only

BCBAs and school psychologists, monthly, rate set in the district contract. District admin seats included.

Pilot

One school first

District tenant set up by us; evaluate on a real caseload before district-wide rollout.

HOW A PILOT RUNS

Live in an afternoon. Judged in a quarter.

Day 1

Tenant + invites

We provision your district, your admin sends role-based invite links, staff sign in with Google or email. No installs, no IT project.

Weeks 1–4

One school, real caseload

Specialists define behaviors and scales; teachers capture. We check in weekly — with the founders, not a support queue.

Week 6+

Review the record

Look at a month of contemporaneous data, a drafted FBA, and the audit log. Then decide about the rest of the district.

✓ Exit cleanly at any point — your data exports in full, then we delete it

See your district's data story in 20 minutes.

Bring one real (de-identified) scenario from your caseload. We'll show the teacher tap, the specialist's measurement, and the draft FBA — live, on the product.
